

**Opgave 1.** 1. Skriv  $\vec{F}$  i sfæriske koordinater og beregn fluxintegralet gennem fladen  $\int_S \vec{F} \cdot d\vec{\sigma}$ , hvor

$$d\vec{\sigma} = \frac{\partial \vec{R}}{\partial \theta} \times \frac{\partial \vec{R}}{\partial \phi} d\theta d\phi.$$

**SVAR:**

$$\vec{F}(r, \theta, \phi) = r(1 + \cos^2(\theta))\vec{e}_r - r \sin(\theta) \cos(\theta)\vec{e}_\theta + r \sin(\theta)\vec{e}_\phi$$

2. Bestem  $\nabla \cdot \mathbf{F}$  og  $\nabla \times \mathbf{F}$ .

**SVAR:**

$$\nabla \cdot \mathbf{F} = 4, \quad \nabla \times \mathbf{F} = 2\vec{k} = 2 \cos(\theta)\vec{e}_r - 2 \sin(\theta)\vec{e}_\theta$$

3. Lad  $V$  være kuglen med radius  $r = 1$ . Bestem  $\int_V \nabla \cdot \mathbf{F} dx dy dz$ .

**SVAR:**

$$\int_V \nabla \cdot \mathbf{F} dx dy dz = \frac{16\pi}{3}$$

**Opgave 2. SVAR:** direkte beregning.

**Opgave 3. SVAR:**

$$f(x) = \frac{1}{4} \sin(3\pi x) + \frac{1}{4} \sin(\pi x)$$

**Opgave 4. SVAR:**

$$y(x) = 1 + \sum_{n \geq 1} \frac{a_n}{\pi^2 n^2 + 3} \sin(n\pi x),$$

hvor

$$a_1 = -\frac{12}{\pi}, \quad a_n = -\frac{(-1)^{n+1} - 1}{(n+1)\pi} - \frac{(-1)^{n-1} - 1}{(n-1)\pi} + 6\frac{(-1)^n - 1}{n\pi}, \quad n \geq 2$$
